

From general to unique, from containers to oversized and specialized, ARRC has experience in shipping all cargo types:

- a wide variety of general cargo (ferrous and non-ferrous metals, forest products, cargo in big bags, crates, etc.)
- boats/yachts, helicopters, planes
- over dimensional and heavy-lift shipments
- hazardous materials
- automobiles, trucks, trailers, tractors and other ro-ro equipment
- containers

Westbound Traffic comprises mostly of aluminum, ferrous and non-ferrous metals, forest products, such as lumber and plywood, and containers. For Eastbound, the Line carries a wide variety of rolling stock, including agricultural, construction, oilfield, drilling and mining equipment, road trucks and passenger cars; project cargo, oversized and overweight equipment for the oilfield, mining and construction industries; containerized cargo.

General Cargo: Packages of cargo or “parcels” (small quantities) known as “general cargo” and individually carried in the cargo compartments of a ship. Such cargo is not in “bulk cargo” form and not in unitized or containerized form.

Forest Products: Well known for its excellent quality, Russian Plywood is one of the popular product on the American market.

Non-Ferrous Metals:

Aluminum is one of the most popular export commodities of the Russian market.

Ro-Ro Cargo: Our vessels were designed with the primary purpose of carrying Ro-Ro cargo and containers.

Project Cargo:

[IMO Cargo:](#) [](#) [](#) [](#) [](#) [](#) [](#)

ARRC complies with all requirements for the carriage of IMO cargo and holds all required approvals and licenses.

Every vessel in the service has successfully passed shipboard inspections organized by international organizations for maritime transportation of dangerous goods. The following references allow ARRC to offer customers safe and reliable transportation of dangerous cargo:

[ISM Code](#)

[IMDG Code](#)

[SOLAS Regulation](#)

[International Maritime Organization](#)

[MARPOL Convention](#)

ARRC strongly recommends to customers to familiarize themselves with the IMDG Code for the classification of dangerous cargo for future transportation. The IMDG Code is the official legal document outlining the rules and requirements for maritime transportation of dangerous goods and maritime pollutants. Help us maintain the quality and safety of the service by ensuring that the data is correctly entered on the required documentation.
